## PILOTING SERVICES

# Because all water is not the same.

Testing filtration media just got easier. Ensure you're using the right filtration media for your water with AV's on-site pilot equipment. Test up to eight different types of media, replicating the real-world fluid dynamics properties of empty bed contact time and hydraulic loading on a small scale. Water sample ports in each column accelerate media pilot testing without compromising the fluid dynamics and hydraulics of the system.

# When it comes to media selection, one size doesn't fit all.

Media analysis and selection is critical to the success of a project and greatly impacts overall O&M costs. We have extensive experience selecting granular activated carbons, ion-exchange resins and other specialty media used to treat drinking water for both municipal and private utilities. The media we select is based on application and site water quality.

CONTAMINANT	MEDIA
PFAS	Coal Based Carbon
	Ion Exchange Resin
	Specialty Media
1,2,3-TCP, TCE, PCE	Coal and Coconut Based Carbons
TOC	Coal Based Carbon
Arsenic	Specialty Media
Chromium 6	Ion Exchange Resin
Perchlorate	Ion Exchange Resin
